

- Half of amphibian populations are in decline worldwide.
- One third of the world's amphibians are threatened with extinction.
- 427 species are critically endangered.
- Some are already lost forever.

Befriend a frog.

Before they all croak!

Frogs Need Friends Too!

Cayman Islands Department of Environment

Frogs are an important part of the food web, being both predator and prey.

They help farmers control insect pests..

Frogs can only live in clean water!
Which makes them good indicators of a healthy environment.

Why are Amphibians dying?

Pollution
Habitat destruction
Climate change
Introduced disease

..and they are food for birds.
